(54) Title: DEVICE FOR RECEIVING A SIGNAL CONTAINING TEXT INFORMATION THAT CAN BE USED FOR PROGRAMMING THE RECEPTION

(57) Abstract: In a device (1) for receiving a signal (S) that can be received via a selectable reception channel, which signal (S) represents visually presentable video information (VI) and text information (TI) contained in the visually presentable video information (VI), firstly, reception stage (12) is provided, which is designed for the channel-selectable reception of the signal (S) in a controllable manner as a function of control information (CI) that can be supplied to the reception stage (12), and, further, an extraction stage (17) is provided, to which the video information (VI) can be sent and which is designed to extract the text information (TI) contained in the visually presentable video information (VI), and, further, programming stage (20) is provided, which, using the extracted text information (TI), is designed for the programmable provision of the control information (CI) for the reception stage (12).
